

## **COIL CLEANING LOG**

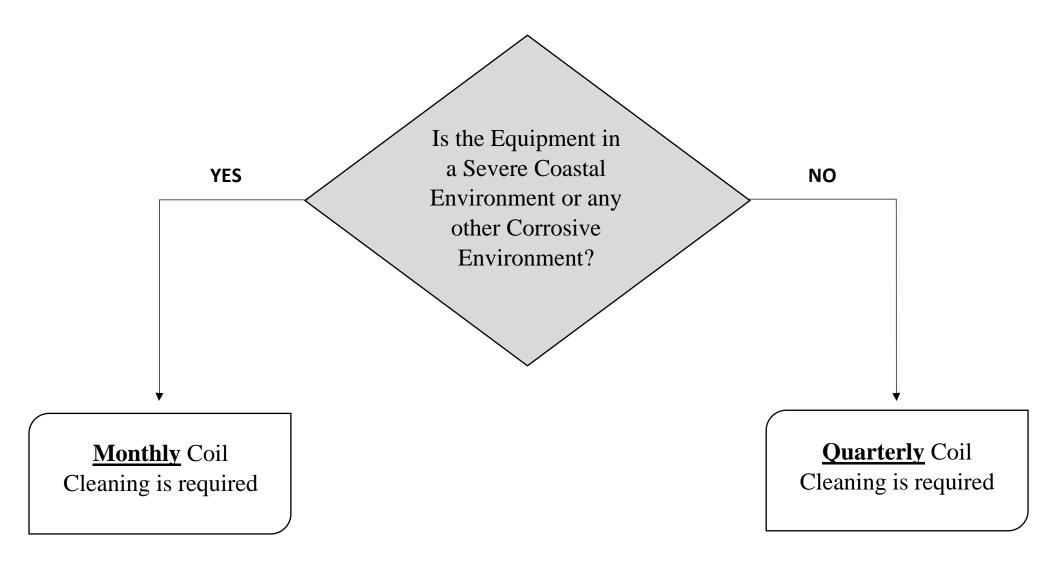

Cleaning Cycle (Circle One): Monthly Quarterly

| Name | Date | Name of Cleaning Product(s) Used | Completion Signature |
|------|------|----------------------------------|----------------------|
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |
|      |      |                                  |                      |

ANY SIGN(S) OF CORROSION MUST BE REPORTED TO WILSENERGY IMMEDIATELY

## **COIL CLEANING FREQUENCY GUIDE**

Severe Coastal Environment – Equipment is 3/4 of a mile off the coast, or less

**Corrosive Environment** – An environment in which the coil is exposed to conditions that are potentially harmful, corrosive, acidic, or abnormal

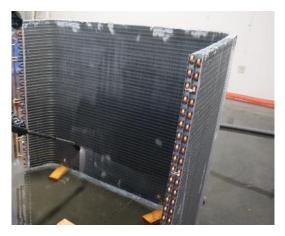

## **COIL CLEANING INSTRUCTIONS**

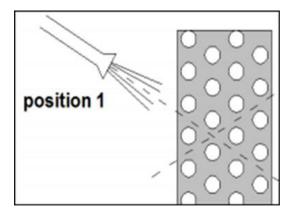

1. Spray the coil with water and a non-acidic detergent (ex: dish soap) in a side-to-side motion starting at the top

2. Continue with the side-to-side motion as you work your way down the coil

(Proper Angle to avoid damage to the coil)
